SUMMARY

Full-stack web developer trained at 42 Network's 1337 coding school, with hands-on experience building real-time web applications, cloud-native deployment pipelines, and microservices-based platforms. Comfortable across the stack — from React/Next.js interfaces to Node.js/Express and Django services — with growing DevOps expertise in Docker, Kubernetes, and GitOps workflows.

EXPERIENCE

Full-Stack Developer Intern

07/2025 - 11/2025

Conseil Industrie Automobile

- Developed and maintained responsive web applications across both frontend and backend.
- Built RESTful APIs, integrated databases, and implemented scalable application features.
- Collaborated with the team using Git, code reviews, and Agile development practices.
- Containerized applications with Docker and assisted with deployment automation.
- Supported CI/CD pipelines, Linux server configuration, and basic cloud infrastructure tasks.

EDUCATION

Software Development

10/2022 - 07/2026

1337 Coding School - Bachelor Degree

Computer Science

09/2019 - 07/2021

ISGI - Associate Degree

PROJECTS

cloud-EC2

- Provisioned and managed cloud infrastructure on AWS EC2 using Terraform.
- Automated server configuration, security hardening, and application deployment with Ansible.
- Deployed containerized applications using Docker and configured Nginx as a reverse proxy.
- Secured services with HTTPS and automated SSL certificate management.
- Implemented CI/CD pipelines to automate application deployment and updates.
- Applied Infrastructure as Code (IaC) and DevOps best practices for scalable, reproducible deployments.

torrent_movies

- Architected a microservices-based streaming platform using NestJS as the primary backend and Django as a dedicated service.
- Integrated the YTS API to fetch movie metadata and generate on-demand streaming via dynamically created magnet links.
- Prioritized scalable backend architecture and real-time media streaming performance.

Orchestrator

2017 -

- Designed and built a cloud-native deployment pipeline using K3s/K3d for lightweight Kubernetes clusters.
- Automated GitOps-based continuous delivery with Argo CD, integrated with DockerHub for image management and CI/CD workflows.
- Streamlined developer onboarding through automated provisioning with Vagrant, ensuring consistent, reproducible build environments.
- Applied modern DevOps best practices to achieve scalability and reproducibility in production-like environments.

SKILLS

Linux

RESTful APIs

JavaScript/TypeScript

Vagrant

Python

Ansible

K3s/K3d

Django

SQL

Express.js
